After many hours of tests I found a "solution" or rather a trick to work. In *SQL* environment I renamed the table with various problems in *DataEase* **eg** : "*ARTICOLI" Iin* "*ARTICOLISOS"*. In *DataEase* I deleted "ARTICOLI.dbo" and I created the link with "*ARTICOLISOS"*. At this point the new *dbo* Table is fully functional. I'm back in the *SQL* environment and I renamed the "*ARTICOLISOS"* table with the original name "*ARTICOLI"*. So in *DataEase* I deleted "ARTICOLISOS.dbo" and after a refresh I created the new form with the *SQL* table "ARTICOLI.dbo" And finally everything works. I think the problem is in updating the *ODBC* links in *DataEase.*
